[Catalog :: Beakers, Cylinders & Flasks :: Flasks :: Culture Flasks :: Nunclon*\[DELTA\] Polystyrene, Sterile](#)

Nunclon*[DELTA] SoLo* Flasks, Polystyrene, Sterile

These polystyrene flasks incorporate the Nunclon[DELTA] treated surface for optimal cell attachment and growth. They feature a low profile design which increases the amount of usable growth surface in a flask with external dimensions of a T-150cm² flask. The low profile design also allows four flasks to be stacked in the same space as three conventional flasks, conserving valuable incubator space. The large bore angled neck facilitates pipet and cell scraper access. The flat-bottom tapered shoulder prevents media from splashing into the neck of the flask. Radiation sterilized.

Working Volume:	50-100 mL
Growth Area:	185 cm ²

Ordering Information: Packaged 5 per sleeve.
